Python OOP Week 5 HW

For these questions you are free to use whatever screen size, color, and shape size/styles that you like.

Question 1
In Processing write code to make three circles move on the screen randomly. It is ok if the balls leave the screen.

Question 2
In Processing write code that shows a button somewhere near the middle of the screen. The button will say click me. When you click on it the screen should go completely black.

Question 3 (Challenge Question)
In Processing write code to make 3 circles move up and down (bouncing off the top and bottom of the screen). When I click on the circle it should disappear.
